EMERGENCY FIRST AID PROCEDURES:
No specific data available, however persons with impaired pulmonary function, airway diseases, asthma, amphysema, chronic bronchitis, etc. may incur further disability if excessive concentrations of dust or fume are inhaled. If prior damage or diseases of the neurologic (nervous), circulatory, hematologic (blood) or renal (kidney) systems has occurred, proper screening or examinations should be conducted on individuals who may be exposed to further risk if handling and use of Ta causes excessive exposure.

HEALTH HAZARDS (ACUTE & CHRONIC)

INHALATION: May cause irritation to the lung and/or other mucous membranes; inhalation of metal dust, fume or powder may result from melting, dross handling, casting, welding, grinding, crushing or similar operations which generate airborne particulate during use of the material.

SKIN: May cause irritation and/or dermatitis; skin contact may cause in some sensitive individuals an allergic response if elements such as chrome and nickel are present.

EYES: May cause irritation or mechanical injury to the eye or surrounding tissue; airborne particulate is always a potential problem as well as inserting fingers into eye socket if the hand or clothing is contaminated.

INGESTION: Hand, clothing, food and drink contact with metal dust, fume or powder can cause ingestion of particulate during hand to mouth activities such as eating, drinking, smoking, nail biting, etc.
***Tantalum metal is not reactive with body fluids and is generally not associated with adverse health effects to the lung or other organ systems; no adverse health effects have been experienced among exposed workers***

**REACTIVITY DATA**

| STABILITY | Stable |
| CONDITIONS CONTRIBUTING TO UNSTABILITY | NA |
| INCOMPATIBILITY (MATERIALS TO AVOID) | Reacts violently with fluorine, chlorine & bromine trifluorides. Contact of metallic dust with strong oxidizers may cause fire/explosions |

**SPECIAL PRECAUTIONS**

PRECAUTIONS TO BE TAKEN IN HANDLING/STORAGE:  
Tantalum must be handled according to the size, shape & quantity of material involved. Solid metal may require use of hoists, cranes, etc. Powders should be moved...
or transported to minimize spill or release potential.

Store metal and metal powder in a dry area. Do not store adjacent to mineral acids. Fine metal powder should be kept away from flames & sources of ignition.
